"reasoning": "We need to output Selenium Java code to extract the given DOM elements, presumably locate them and maybe interact? The user says \"Extract the below given DOM ... and provide me the selenium java code. Instructions: Do not use ID if the value has number in it. Provide only java code and no explanations needed\". So we need to write Java code that locates these elements without using ID if the ID contains numbers. The IDs: createLeadForm_companyName (no numbers), createLeadForm_lastName (no numbers), createLeadForm_firstName (no numbers), ext-gen630 (has numbers). So we should not use ID for the submit button (ext-gen630). For others we can use ID. But we could also use other locators like name or class. Provide code that extracts (maybe gets text/value). Provide only Java code.\n\nWe'll write something like:\n\nWebDriver driver = new ChromeDriver();\ndriver.get(\"url\");\nWebElement companyName = driver.findElement(By.id(\"createLeadForm_companyName\"));\nWebElement lastName = driver.findElement(By.id(\"createLeadForm_lastName\"));\nWebElement firstName = driver.findElement(By.id(\"createLeadForm_firstName\"));\nWebElement submitBtn = driver.findElement(By.cssSelector(\"input[type='submit'][value='Create Lead']\"));\n\nOr use By.xpath with value. Provide code snippet.\n\nProbably include imports.\n\nWe'll output only code."
