Team Lead Review Summary

I have reviewed the test suite for Internal Fund Transfer (Same Bank). The coverage encompasses critical path validation (P0), edge cases for balance management (P1), and UI/UX validation (P2).

Review Comments:

1. **Risk Coverage: P0 scenarios successfully address the core transaction integrity.**
2. **Validation Logic: Negative scenarios include necessary boundary value analysis for zero and overdraft attempts.**
3. **Data Consistency: Ensure that the provided Account Numbers in the test data are refreshed in the UAT environment before execution to avoid 'Locked Account' false negatives.**
4. **Security Note: Recommend adding a follow-up suite for Transaction PIN/OTP multi-factor authentication if not already covered by the global auth module.**

Test Case Document: Internal Fund Transfer (Same Bank)

TC-ID	Priority	Test Description	Preconditions	Test Steps	Test Data	Expected Result	Actual Result
TC-001	P0	Successful Transfer to Active Beneficiary	1. User logged in. 2. Sufficient balance. 3. Beneficiary active.	1. Navigate to Transfer. 2. Select Internal Account. 3. Enter Amount. 4. Click Transfer.	From: 1001 To: 1002 Amt: $500	Funds transferred; Success message displayed; Balance updated.	[Pending]
